How to Use This Suite

Execute after the deploy steps in **SR-04 Section 12**. Priorities: **P1** must pass before go-live sign-off, **P2** within the week, **P3** nice-to-verify. Record results in the Excel workbook (SR-05 .xlsx) — Result dropdown, Tested By, Date, Notes. **Sign-off rule: every P1 = Pass ⇒ per-tenant licensing approved for live. Any P1 Fail ⇒ stop and report to Ejaz immediately.**

Coverage: Product commit `1fcb7f7` (per-tenant licensing + Tenants screen) and Central commit `76ddf09` (provisioning key delivery). Regression cases confirm client-hosted installs are untouched.

A. Migration & data move

ID	P	Test	Steps	Expected
TC-A01	P1	Migration adds company_id and unique index cleanly (Pre: Product repo at <code>1fcb7f7</code> ; DB backed up)	1. php artisan migrate 2. DESCRIBE installation_licenses	Migration <code>2026_08_12_000400</code> runs without error; company_id column nullable BIGINT with UNIQUE index; no data lost
TC-A02	P1	Khan key auto-moves to Khan's tenant row (Pre: Install slot holds Khan's key; exactly one AMETECS_SAAS company named 'Khan Incorporation')	1. Run migration 2. SELECT company_id, license_key FROM installation_licenses	The existing row's company_id = Khan's company id; key, bundle, status preserved; no second row created
TC-A03	P2	No-match safety (client-hosted shape) (Pre: DB where bundle company name matches no AMETECS_SAAS company)	1. Run migration on such a DB (e.g. local seeded)	Nothing moves: the licensed row keeps company_id NULL; behaviour identical to before
TC-A04	P2	Ambiguity safety — two same-name SaaS companies (Pre: Two AMETECS_SAAS companies with identical name; install slot keyed)	1. Run migration	Move is skipped entirely (count != 1); no data changed
TC-A05	P3	Migration down() reverses cleanly (Pre: Migration applied)	1. php artisan migrate:rollback --step=1	Unique index and company_id column dropped; table intact
TC-A06	P1	Fresh install slot after key move (Pre: Migration moved the key (Khan case))	1. Open Licence screen as Super Admin 2. Check evaluation end date	A fresh empty install row exists (created on first access); shows EVALUATION with 7 days from creation; agents of non-SaaS companies keep working during window

B. Licence resolution model

ID	P	Test	Steps	Expected
TC-B01	P1	AMETECs_SAAS company governed by own row (<i>Pre: SaaS company exists</i>)	1. tinker: InstallationLicense::governing(\$saasCompany)	Returns row with company_id = that company; creates it empty on first call
TC-B02	P1	Non-SaaS company governed by install row (<i>Pre: Company with deployment_model LAN/PRIVATE_CLOUD/HYBRID/null</i>)	1. tinker: InstallationLicense::governing(\$company)	Returns the install-level row (company_id NULL) — pre-existing behaviour
TC-B03	P2	Null company (operator context) → install row	1. tinker: InstallationLicense::governing(null)	Returns install-level row
TC-B04	P2	forCompany is idempotent (<i>Pre: SaaS company</i>)	1. Call InstallationLicense::forCompany(\$id) twice	Same row id both times; created_at unchanged (evaluation clock stable)
TC-B05	P2	Unique index blocks duplicate tenant rows (<i>Pre: Tenant row exists</i>)	1. Attempt raw INSERT with same company_id	MySQL rejects with duplicate-key error; app never creates duplicates (firstOrCreate)
TC-B06	P3	current() ignores tenant rows (<i>Pre: Tenant rows exist</i>)	1. tinker: InstallationLicense::current()	Returns only the company_id-NULL row, never a tenant's

C. Licence screen by role

ID	P	Test	Steps	Expected
TC-C01	P1	Cloud tenant admin sees own licence with scope line (Pre: Khan admin login (via /khan or /admin console))	1. Sign in as Khan COMPANY_ADMIN 2. Open Licence	Scope row: 'This licence belongs to Khan Incorporation — issued and managed by SmartEPT Central'; Khan's masked key, plan, seats, expiry shown
TC-C02	P1	Tenant admin Save & validate writes own row only (Pre: Khan admin; valid key from Central)	1. Paste key, Save & validate 2. Check installation_licenses	Key stored on Khan's row (company_id set); install slot untouched; status ACTIVE after validation
TC-C03	P2	Tenant admin Validate now phones Central for own key (Pre: Khan row configured)	1. Click Validate now 2. Check last_checked_at on both rows	Khan row refreshed; install row last_checked_at unchanged
TC-C04	P2	Offline licence card hidden for cloud tenant admin (Pre: Khan admin on Licence screen)	1. Inspect page	'Offline licence file' card not visible; fingerprint/import controls absent
TC-C05	P1	Offline .lic import API blocked for tenant scope (Pre: Khan admin token)	1. POST /api/license/import with any token	HTTP 403: 'Offline licence files apply to self-hosted servers...' message; no state change
TC-C06	P2	Super Admin licence screen shows install slot + pointer (Pre: super@smartept.io)	1. Open Licence	Install-level licence (or EVALUATION) shown; note 'Cloud tenants on this install carry their own licences — see the Tenants screen'
TC-C07	P1	Client-hosted admin behaviour unchanged (regression) (Pre: Local seeded install (LAN company); admin@ameteecs.io)	1. Open Licence; save key; validate; import .lic	Identical to pre-change behaviour: install slot used, offline card visible and functional
TC-C08	P2	Device seats counted per scope (Pre: Khan row active with devices; other companies have devices too)	1. Khan admin Licence screen: seats line 2. Super admin Licence screen: seats line	Khan sees only Khan devices registered; install scope counts all devices on the box

D. Provisioning key delivery (Central → Product)

ID	P	Test	Steps	Expected
TC-D01	P1	New cloud tenant fully licensed hands-free (Pre: Central 76ddf09 deployed; product 1fcb7f7 deployed; provisioning secret set)	1. In Central create/pay a cloud tenant (or Save an active one) 2. Open product Tenants screen	Company + admin created AND licence row ACTIVE with the tenant's key — no manual key entry anywhere

ID	P	Test	Steps	Expected
TC-D02	P1	Re-provision re-pushes the key idempotently (<i>Pre: Existing provisioned tenant</i>)	1. Save the tenant again in Central 2. Check product row	Same key → row untouched (status/bundle preserved); changed key → row reset and revalidated
TC-D03	P2	Provision without licence_key still works (legacy) (<i>Pre: Tenant with no active licence</i>)	1. Provision from Central	Company + admin created; no licence row forced; tenant runs on 7-day evaluation
TC-D04	P1	Bad provisioning secret rejected	1. POST /api/provision with wrong X-Provision-Secret	HTTP 401; nothing created or changed
TC-D05	P2	Open my Console SSO unaffected (<i>Pre: Provisioned tenant with console_url</i>)	1. Central portal → Open my Console	Signed-in landing on branded console exactly as before

E. Agent enforcement (EnsureLicensed)

ID	P	Test	Steps	Expected
TC-E01	P1	Licensed tenant agents sync normally (<i>Pre: Khan licence ACTIVE</i>)	1. Khan employee signs into agent; agent syncs	register-device / heartbeat / sync all pass
TC-E02	P1	One tenant's dead licence never blocks another (<i>Pre: Tenant X row set status=revoked (tinker); Khan ACTIVE</i>)	1. X agent syncs 2. Khan agent syncs	X gets 403 LICENSE_BLOCKED (reason revoked); Khan completely unaffected
TC-E03	P1	Expired within grace still syncs (<i>Pre: Tenant row status=expired, expires_at within grace_days</i>)	1. Agent sync	Traffic passes (grace window honoured per tenant)
TC-E04	P2	Expired beyond grace blocks (<i>Pre: Tenant row expired beyond grace</i>)	1. Agent sync	403 LICENSE_BLOCKED for that tenant only
TC-E05	P1	Unlicensed SaaS tenant: 7-day evaluation then block (<i>Pre: SaaS company with no key (fresh row)</i>)	1. Sync during window 2. Set row created_at back 8 days (tinker); sync again	Passes during window; then 403 with reason evaluation_expired
TC-E06	P2	Non-SaaS companies ride the install slot (<i>Pre: Install slot ACTIVE (or in evaluation)</i>)	1. Agent of LAN company syncs	Governed by install slot exactly as before the change
TC-E07	P2	Central unreachable → last verdict stands per tenant (<i>Pre: Kill SMARTEPT_LICENSE_URL reachability (hosts file) on a test box</i>)	1. Tenant with cached ACTIVE syncs	Sync continues; unreachable_since recorded; no false block

F. Device seats per tenant

ID	P	Test	Steps	Expected
TC-F01	P1	Seat claimed against the employee's tenant key (Pre: Khan ACTIVE with free seats)	1. New Khan employee registers a device 2. Central licence page for Khan	Seat activates on Khan's licence at Central; devices_active increments for Khan only
TC-F02	P1	Tenant seat limit blocks only that tenant (Pre: Tenant at device_limit)	1. One more device registers for that tenant 2. Khan (different tenant) registers a device	First gets 409 LICENSE_SEAT_BLOCKED device_limit_reached; Khan's registration succeeds
TC-F03	P2	Unbind releases the tenant's seat (Pre: Bound device on Khan)	1. Devices → Unbind 2. Check Central seat count for Khan	Seat released on Khan's licence; token revoked; device blocked from re-registering until rebind
TC-F04	P2	Rebind reclaims on the right licence (Pre: Unbound Khan device)	1. Devices → Rebind	Seat reclaimed against Khan's key; 409 with clear message if none free
TC-F05	P2	Relieve employee releases every device per tenant (Pre: Khan employee with 2 devices)	1. Employees → Relieve (with reason)	Both seats released on Khan's licence; devices unbound; tokens revoked

G. Storage reporting & governance

ID	P	Test	Steps	Expected
TC-G01	P1	Per-tenant storage reported to Central (Pre: Two tenants with different storage footprints)	1. Validate each tenant (Tenants → Validate) 2. Central: storage_usages rows	Each tenant's storage_gb equals ITS OWN files only (not the whole box)
TC-G02	P2	Install row still reports whole-box storage (Pre: Install slot keyed (client-hosted case))	1. Validate install licence	storage_gb = all evidence files on the server
TC-G03	P1	Tenant over quota pauses only that tenant's screenshots (Pre: Force tenant over 100% (Central storage governance))	1. Validate tenant (pause flag returns) 2. That tenant's agent uploads screenshot 3. Khan agent uploads screenshot	Over-quota tenant gets 409 'Storage is full...'; Khan uploads fine; activity tracking continues for both
TC-G04	P2	Global storage pause still works (backward compat) (Pre: Set Setting storage_paused=1)	1. Any agent uploads screenshot	409 for all companies — install-wide switch honoured as before

ID	P	Test	Steps	Expected
TC-G05	P2	Storage bar colours & percentages on Tenants screen (<i>Pre: Tenants at <70%, 70–89%, ≥90% of quota</i>)	1. Open Tenants; compare used/quota/%	Bar green <70, amber 70–89, red ≥90; % = used/quota rounded; 'no quota' shown when unlimited

H. Tenants screen (HOST)

ID	P	Test	Steps	Expected
TC-H01	P1	Visible to Super Admin only (<i>Pre: Accounts of each role</i>)	1. Sign in as SUPER_ADMIN, COMPANY_ADMIN, HR_ADMIN, EMPLOYEE in turn	HOST → Tenants appears only for SUPER_ADMIN; other roles never see the section
TC-H02	P1	API gated server-side (<i>Pre: Company admin token</i>)	1. GET /api/tenants 2. POST /api/tenants/{id}/license/validate	Both 403 regardless of UI
TC-H03	P2	KPI chips correct (<i>Pre: Known tenant mix</i>)	1. Open Tenants; cross-check chips	Cloud tenants count, other companies, Licences OK x/y, devices bound, total evidence storage all match DB
TC-H04	P2	Slug links open branded consoles (<i>Pre: Tenants with slugs</i>)	1. Click /khan link	New tab: admin.smartept.com/khan branded login/console
TC-H05	P1	Licence pills reflect every state (<i>Pre: Tenants in states: active, evaluation, no licence, expired; plus a non-cloud company</i>)	1. Review each row's pill	ACTIVE green; EVALUATION amber with days left; NO LICENCE red; EXPIRED per grace; non-cloud shows INSTALL pill
TC-H06	P2	Seats column warns when full (<i>Pre: Tenant with bound == device_limit</i>)	1. Review seats cell	Rendered amber/bold 'n / n'
TC-H07	P1	Per-tenant Validate button works (<i>Pre: Tenant with stale last check</i>)	1. Click Validate on the row	Phone-home fires for THAT tenant only; button shows result; row refreshes with new last-check time

ID	P	Test	Steps	Expected
TC-H08	P3	Storage cache notice	1. Footer note on Tenants	States 10-minute refresh + billing-lives-in-Central reminder + install licence status
TC-H09	P2	Validate on non-cloud company rejected cleanly	1. POST /api/tenants/{nonCloudId}/license/validate	422 'uses the install-level licence — validate it from the Licence screen'

I. Daily validate command

ID	P	Test	Steps	Expected
TC-I01	P1	Command validates install + every tenant row (<i>Pre: Install + 2 tenant rows keyed</i>)	1. php artisan smartept:validate-license	One output line per configured row (Install / Tenant #id (name)); each bundle refreshed
TC-I02	P2	Exit code fails when any row blocked (<i>Pre: One tenant revoked</i>)	1. Run command; echo \$?	Non-zero exit; blocked row named in output
TC-I03	P3	No keys anywhere → graceful warn (<i>Pre: Fresh DB, no keys</i>)	1. Run command	Warning about no key; exit success; nothing crashes

J. Automated & regression

ID	P	Test	Steps	Expected
TC-J01	P1	PerTenantLicenseTest green (<i>Pre: Local Laragon</i>)	1. php artisan test --filter=PerTenantLicenseTest	All 5 tests pass
TC-J02	P1	M9 licence + M11 offboarding suites green (regression)	1. php artisan test --filter=M9LicenseTest 2. --filter=M11OffboardingTest	All pass unchanged — client-hosted behaviour untouched
TC-J03	P2	Full product suite green	1. test.bat	No failures
TC-J04	P1	Live smoke after deploy (<i>Pre: Steps 3–4 of SR-04 §12 done</i>)	1. /khan web login 2. Khan agent sign-in + sync 3. Tenants screen on live 4. Central tenant storage stats next day	All green; Khan on own licence; per-tenant storage flowing

58 cases · P1 = 28 gating. Automated companion: tests/Feature/PerTenantLicenseTest.php (5 tests, run via php artisan test).
