Contents

01 How to Use This Suite

02 A. Migration & automated tests

03 B. Admin billed upgrade — cloud subscription

04 C. Admin billed upgrade — perpetual

05 D. Downgrade-at-renewal — admin side

06 E. Downgrade-at-renewal — portal + billing

07 F. Portal upgrade cards & visibility

08 G. Self-service .lic re-download

09 H. Paper trail & money regression

How to Use This Suite

Run **locally in Laragon first** (SR-06 §10 Step 1–2), then repeat the P1s on live after deploy.

Priorities: **P1** must pass before go-live, **P2** within the week, **P3** nice-to-verify. Record results in the Excel workbook (SR-07 .xlsx). **Sign-off rule: every P1 = Pass ⇒ licence change flows approved for live. Any P1 Fail ⇒ stop and report to Ejaz immediately.**

Coverage: Central commit `face8e7` — admin billed upgrade (cloud pro-rata + perpetual lifetime-difference), downgrade-at-renewal, portal cards & visibility, self-service .lic re-download, paper-trail and money regression.

A. Migration & automated tests

ID	P	Test	Steps	Expected
TC-A01	P1	Migration adds renewal_device_limit cleanly (Pre: Central at <code>face8e7</code> ; local Laragon DB)	1. php artisan migrate 2. DESCRIBE licences	2026_08_12_000500 runs clean; renewal_device_limit nullable UNSIGNED INT after device_limit; no ENUMs; no data lost
TC-A02	P1	LicenceChangeFlowsTest green	1. php artisan test --filter=LicenceChangeFlowsTest	All 5 tests pass (incl. the exact ₹10,000 + ₹1,800 GST interpolated-difference case)
TC-A03	P1	Progressive pricing regression green	1. php artisan test --filter=PerpetualProgressivePricingTest	Full acceptance matrix still passes — the upgrade engine changed nothing in base pricing
TC-A04	P2	Migration rollback clean (Pre: Migration applied)	1. php artisan migrate:rollback --step=1 2. Re-migrate	Column drops and re-adds without error

B. Admin billed upgrade — cloud subscription

ID	P	Test	Steps	Expected
TC-B01	P1	Upgrade... button appears on active licences only (Pre: <i>Licences list with active + suspended + trial rows</i>)	1. Central admin → Licences 2. Compare rows	Active subscription & perpetual rows show Upgrade...; suspended/expired/trial rows do not
TC-B02	P1	Pro-rata order raised with GST paper trail (Pre: <i>Active annual cloud subscription, e.g. 25 users, months remaining</i>)	1. Upgrade... → new total 30 → Raise upgrade order	Order number returned; description 'Mid-period upgrade 25 → 30 users — pro-rata for N remaining day(s)'; total = diff/month × remaining months + 18% GST; pay link copyable
TC-B03	P1	Recording payment applies the new limit instantly (Pre: <i>Upgrade order from previous case</i>)	1. Billing → the order → Record payment (full) 2. Licences list	Licence shows the new limit; expiry date UNCHANGED; licence History shows upgrade_order + order paid; GST invoice issued in the shared series
TC-B04	P2	Reduction attempt rejected with guidance (Pre: <i>Active 30-user subscription</i>)	1. Upgrade... → enter 20	422: 'Enter a user count higher than the current 30 — reductions apply at renewal, not mid-period'
TC-B05	P2	Expired-period subscription refused (renew instead) (Pre: <i>Subscription past expiry</i>)	1. Upgrade... → any higher count	422: 'no remaining period — use Renew instead'

C. Admin billed upgrade — perpetual

ID	P	Test	Steps	Expected
TC-C01	P1	Exact interpolated difference on example bands (Pre: <i>Perpetual licence 15 users; bands 15 → ₹15k, 30 → ₹25k configured</i>)	1. Upgrade... on the perpetual row → 30 users → Raise order	Subtotal exactly ₹10,000; GST ₹1,800; total ₹11,800; description 'Lifetime licence upgrade 15 → 30 users — one-time price difference'
TC-C02	P1	Payment raises limit; AMC rebases next cycle (Pre: <i>Order from previous case</i>)	1. Record payment 2. Later: raise AMC quote for this client	device_limit = 30 immediately; the NEXT AMC quote prices 18% of the 30-user interpolated price (amcQuote reads prevailing count)

ID	P	Test	Steps	Expected
TC-C03	P1	Above priced bands → custom quote, never a price (Pre: Bands end at 100 users)	1. Upgrade... → 150 users	422 custom-quotation message with WhatsApp number; NO order created; ₹0 impossible
TC-C04	P2	Perpetual reduction rejected (Pre: Perpetual 30 users)	1. Upgrade... → 20	422: 'a lifetime licence never reduces once purchased'
TC-C05	P2	Modal wording is kind-aware	1. Open Upgrade... on a subscription, then on a perpetual	Subscription modal explains pro-rata/expiry-unchanged; perpetual modal explains one-time difference + .lic re-issue note

D. Downgrade-at-renewal — admin side

ID	P	Test	Steps	Expected
TC-D01	P1	Edit licence schedules a reduction (Pre: Active 40-user subscription)	1. Edit → 'Reduce to (at next renewal)' = 25 → Save 2. Licences list	Saved; row shows amber '↓ 25 at renewal'; History shows licence.edited with renewal_device_limit
TC-D02	P1	Guard: not below devices in use (Pre: Licence with 10 active devices)	1. Edit → reduction = 5 → Save	422: 'Scheduled reduction is below the devices currently in use — free seats first'
TC-D03	P2	Blank clears the schedule (Pre: Schedule set)	1. Edit → clear the field → Save	renewal_device_limit NULL; badge gone

E. Downgrade-at-renewal — portal + billing

ID	P	Test	Steps	Expected
TC-E01	P1	Portal card schedules a reduction (Pre: Client portal login; active 40-user subscription; 3 devices in use)	1. Buy & Renew → 'Reduce users at next renewal' → 25 → Schedule	Toast confirms; card shows 'Scheduled: your next renewal reduces to 25 users'; Cancel button appears; audit client.schedule_reduction

ID	P	Test	Steps	Expected
TC-E02	P1	Renewal order bills the REDUCED size (Pre: Schedule = 25 on a 40-user licence)	1. Portal → Renew now (or admin raises renewal) 2. Inspect order	Order line priced for 25 devices; description contains '25 devices' + 'scheduled reduction from 40 users applies on payment'; meta apply_device_limit = 25
TC-E03	P1	Payment applies reduction and clears schedule (Pre: Renewal order from previous case)	1. Record payment / pay 2. Check licence	device_limit = 25; renewal_device_limit = NULL; expiry extended one period; portal card no longer shows a schedule
TC-E04	P2	Portal guard: not a reduction / below devices in use (Pre: 40-user licence, 3 devices in use)	1. Try scheduling 45 2. Try scheduling 2	45 → 'That is not a reduction — use the mid-period upgrade'; 2 → 'You currently have 3 device(s) in use...'
TC-E05	P2	Cancel schedule works (Pre: Schedule set)	1. Portal card → Cancel schedule	renewal_device_limit NULL; message 'renewals bill your current size again'
TC-E06	P2	Perpetual cannot schedule a reduction (Pre: Perpetual licence id)	1. POST client/api/licences/{id}/schedule-reduction devices=10	422: 'Only Cloud subscriptions reduce at renewal — a lifetime licence never reduces once purchased'
TC-E07	P3	Renewal without schedule unchanged (regression) (Pre: No schedule)	1. Renew and pay	Billed at current size; limit unchanged; identical to pre-change behaviour

F. Portal upgrade cards & visibility

ID	P	Test	Steps	Expected
TC-F01	P1	Perpetual tenant sees lifetime upgrade card (Pre: Portal login of a perpetual client (active))	1. Buy & Renew	'Add users to your lifetime licence' card with one-time-difference wording + never-reduces note; Get upgrade amount & pay works end-to-end via pay page
TC-F02	P1	Cloud tenant still sees pro-rata card (regression) (Pre: Active cloud subscription with days remaining)	1. Buy & Renew	'Add users mid-period (pro-rata)' card exactly as before; payment raises seats instantly
TC-F03	P2	Why-not note replaces silence (Pre: Trial tenant portal; then an expired tenant)	1. Buy & Renew on each	Trial: 'Trials upgrade by buying a plan below...'; expired: 'Your licence is expired — renew or contact us...' — never a blank page
TC-F04	P2	Portal upgrade endpoint branches by kind (Pre: Perpetual licence via API)	1. POST client/api/licences/{id}/upgrade devices=30	Order created via createPerpetualUpgradeOrder (description says lifetime price difference), not the pro-rata engine

G. Self-service .lic re-download

ID	P	Test	Steps	Expected
TC-G01	P1	Bound licence downloads a fresh signed .lic (Pre: Client-hosted active licence WITH server_fingerprint; portal login)	1. Portal → Licences → Download licence file (.lic) 2. Import on the product Licence screen	File downloads (correct filename); product imports and activates; bundle carries CURRENT device_limit; audit licence.file_issued by client:

ID	P	Test	Steps	Expected
TC-G02	P1	Unbound licence gets guidance, not a file (Pre: Client-hosted licence with NO fingerprint)	1. Portal → Licences	Message: 'available once your server has validated online once (or send us its fingerprint...)' ; endpoint returns 422 if called directly
TC-G03	P1	Client can NEVER set a new fingerprint (Pre: Bound licence)	1. POST client/api/licences/{id}/license-file with a 'fingerprint' body field	Field ignored — file is signed with the STORED fingerprint only; moving machines still requires admin Shift machine
TC-G04	P2	Cloud-deployment client refused politely (Pre: Cloud tenant portal)	1. Call the license-file endpoint	422: 'Licence files are for self-hosted servers — your Cloud console is licensed automatically'
TC-G05	P2	Post-upgrade .lic carries the new seat count (Pre: Perpetual client upgraded 15 → 30 and paid)	1. Re-download .lic 2. Import on server	Product Licence screen shows 25 → 30-seat entitlement (new device_limit) after import
TC-G06	P2	Cross-tenant access blocked (Pre: Two tenants; tenant B's licence id)	1. As tenant A, call license-file / upgrade / schedule-reduction on B's id	404 on every endpoint (tenant scoping)
TC-G07	P3	Admin Licence file button unchanged (regression)	1. Admin → Licences → Licence file (with and without stored fingerprint)	Behaviour identical to 6-Aug build incl. fingerprint remembering and re-download

H. Paper trail & money regression

ID	P	Test	Steps	Expected
TC-H01	P1	GST invoice issued in the shared series for upgrades (Pre: Paid admin upgrade order)	1. Billing → Invoices	Invoice numbered in the single EPT-{FY} series; amounts match order (subtotal/GST/total); appears in client portal invoices

ID	P	Test	Steps	Expected
TC-H02	P1	History timeline complete (Pre: Licence that was upgraded + scheduled + .lic-downloaded)	1. Admin → Licences → History	Timeline shows upgrade_order, order paid, licence.edited (schedule), file_issued (client) — nothing missing
TC-H03	P2	USD tenant upgrade converts currency (Pre: Tenant with currency USD)	1. Raise an upgrade order	Line converted at usd_inr_rate; GST 0 for USD; '(USD)' suffix on the line
TC-H04	P2	Existing flows untouched (Central smoke)	1. php artisan test (full Central suite) or test.bat	FinancialFlowTest, GstInvoiceTest, ClientPortalTest, CentralSmokeTest all green

Automated companion: *tests/Feature/LicenceChangeFlowsTest.php* (5 tests) + *PerpetualProgressivePricingTest* regression.
