SmartEPT — Business Flow Testing Guide

End-to-end journey testing: 14 scenarios from first visit to lifetime lifecycle, step-by-step with expected results

Version 1.0

12 August 2026

Prepared for: Ejaz Hussain, MD

Contents

01 Purpose, Scope & Ground Rules

02 BF-01 — Visitor → Lead (marketing funnel)

03 BF-02 — Visitor → Free Trial (OTP-gated)

04 BF-03 — Trial → Paid Cloud (conversion + provisioning + agent)

05 BF-04 — Visitor → Direct Perpetual Buy → On-Prem Install → .lic ACTIVE

06 BF-05 — International USD Buy (export invoice)

07 BF-06 — Quotation Road (portal quote → management pays)

08 BF-07 — Sales-Assisted Credit Client

09 BF-08 — Coupons & Discounts on the Money Path

10 BF-09 — Renewal, Dunning & Suspension Ladder

11 BF-10 — Growth: Upgrades

12 BF-11 — AMC Year-2 (On-Prem)

13 BF-12 — Hardware Change (release / shift machine)

14 BF-13 — Corrections: Refund & Credit Note

15 BF-14 — Identity & Communications Backbone

16 Execution & Sign-off

1. Purpose, Scope & Ground Rules

This guide tests the **business**, not individual screens: each scenario walks one complete customer journey from the Business Flow document (DOC BF-01) and checks every hand-off — page → email → payment → ledger → licence → console → agent. Execute it after the unit-level Session Test Suite (DOC SR-02) is green.

Environment prerequisites (set up once):

1. Test on the **local Laragon** stack first (smartept.com hosts-mapped, smartept.test product), then repeat the money-critical scenarios on **live** with ₹1-class real payments or gateway test mode.
2. Central Settings filled: Razorpay keys, product URL + provisioning/SSO secrets, SMTP (email must actually deliver), USD rate; Interakt active if WhatsApp is to be tested.
3. Pricing bands configured (use the standard set: 5–15 ₹15,000 ... 151–200 ₹90,000, 201+ Custom) and one live coupon (e.g. WINTER26, 15%, ≥10 devices).
4. Product console reachable; global SMTP set in product Ops → Email/SMTP; one test client company with its own SMTP for the client-relay scenario.
5. Fresh test email inboxes (use plus-addressing: name+bf01@yourdomain) — **every scenario uses a NEW email**.
6. Record every run in the companion Excel tracker ([SmartEPT-Business-Flow-Testing-2026-08-12.xlsx](#)): Status per step, evidence (screenshot/email) links in Remarks. **Any failed step in BF-01...BF-07 is a release blocker — report to Ejaz sir immediately.**

The consolidated journey under test:

CONSOLIDATED — Visitor to Lifetime Customer

2. BF-01 — Visitor → Lead (marketing funnel)

Step	Actor	Action	Expected
1	Visitor	Open smartept.com fresh (incognito)	Landing loads; hero price = first-band price; no ™/® anywhere
2	Visitor	Play with pricing slider, On-premises tab: 41 / 61 / 201 users	₹33,250 / ₹44,400 / "Custom quotation" — matches /buy exactly
3	Visitor	Fill the WhatsApp lead form (name, company, phone, devices, plan) and send	WhatsApp chat opens pre-filled
4	Sales	Check Central → Leads and the sales inbox	Lead recorded with devices + message; instant email to sales received
5	Sales	Update lead status/notes	Pipeline reflects the change

Pass: visitor never blocked, lead captured twice (chat + CRM), prices consistent everywhere.

3. BF-02 — Visitor → Free Trial (OTP-gated)

Step	Actor	Action	Expected
1	Prospect	Landing → Start free trial; fill form with NEW email, own password	Step 2 appears: "We emailed a 6-digit code..."
2	Tester	Check Central admin BEFORE verifying	NO tenant / portal user exists yet
3	Prospect	Enter a WRONG code	Clear error; still nothing created
4	Prospect	Enter the emailed code	Trial activates; auto-login to client portal
5	Tester	Verify in Central	Tenant status trial, deployment cloud, terms timestamped; owner user email-verified
6	Tester	Check the lead/trial views	Trial visible to sales from day one

Step	Actor	Action	Expected
7	Tester	(Time-shift or wait) trial reminders	Emails at 3 / 1 / 0 days before expiry, deduplicated

Pass: OTP is a hard gate; the trial exists only after verification; reminders fire.

4. BF-03 — Trial → Paid Cloud (conversion + provisioning + agent)

Step	Actor	Action	Expected
1	Owner	From the BF-02 portal: Buy — Cloud, 25 users, Annual	Server quote: 25 × band rate × 12; GST per state
2	Owner	Pay via Razorpay (test/₹1-class)	Payment captured; portal shows licence ACTIVE
3	Tester	Verify the golden chain in Central	Ledger row; licence key SEPT-...; tenant active; FY-consecutive GST invoice + receipt emailed
4	System	Cloud provisioning	Console created at admin.smartept.com/(slug); portal shows hosted-console card
5	Owner	Click SSO	Signed into the console with NO password typed
6	Admin	Set up org structure + a policy; install agent on one PC	Employee signs in → device registers → consent screen → tracking starts per policy
7	Tester	Check seats + storage	Seat cap = licence limit enforced; storage meter shows pooled 500 MB/user

Pass: one unbroken chain from portal click to a monitored PC.

5. BF-04 — Visitor → Direct Perpetual Buy → On-Prem Install → .lic ACTIVE

Step	Actor	Action	Expected
1	Buyer	/buy → Own-Perpetual, 61 users, INR, Telangana + GSTIN	Price ₹44,400 (progressive); GST = CGST+SGST split
2	Buyer	Add Remote Assisted Setup; submit + pay	Setup ₹8,100 on its own line; payment captured

Step	Actor	Action	Expected
3	Tester	Verify	Perpetual licence (no expiry) issued; invoice FY series; tenant active; buyer auto-signed-in
4	Client	Portal → Downloads → installer	Download works and is logged
5	Client	Install console on a test server	7-day evaluation auto-starts , full features
6	Client	Licence screen → copy machine fingerprint → send to Ametecs	Fingerprint copies in one click
7	Ametecs	Central licence card → issue licence file for that fingerprint	<code>.lic</code> generated (needs signing key present)
8	Client	Import <code>.lic</code>	Status ACTIVE — perpetual, offline ; unplug internet and verify it stays active
9	Tester	Try the same <code>.lic</code> on a DIFFERENT machine	Rejected: server mismatch (and Central alert on phone-home installs)

Pass: money → licence → sovereign offline installation, node-locked.

6. BF-05 — International USD Buy (export invoice)

Step	Actor	Action	Expected
1	Buyer	/buy → USD currency, Cloud 30 users annual	\$ prices at the admin FX rate; "GST — export (0%)"
2	Buyer	Pay by card (Stripe path / export-invoice flow)	Payment recorded on the ledger
3	Tester	Check invoice	0% GST export invoice, FY-consecutive number, USD amounts

7. BF-06 — Quotation Road (portal quote → management pays)

Step	Actor	Action	Expected
1	Manager	Portal → configure Perpetual 100 users → "Prefer a formal quotation"	Quote EPT-Q-... created; requested_by = manager; printable branded quote
2	Manager	Copy the pay link; apply the live coupon on the quote	Coupon locked into the quote lines
3	Tester	Disable the coupon in admin, then open the pay link	Quote still honours the locked-in discount

Step	Actor	Action	Expected
4	Management	Pay the link	Golden chain: licence + invoice + activation
5	Tester	(Separate run) leave a quote unpaid	Quote-chaser email goes out; quote appears in MD digest

8. BF-07 — Sales-Assisted Credit Client

Step	Actor	Action	Expected
1	Sales	Admin → Quote for NEW client (prospect one-screen), Cloud 25 annual	Prospect tenant (pending) + quote created together
2	Sales	Approve → Record Payment Partial (e.g. ₹5,000) with payable-by date	Provisioning fires on first money: tenant ACTIVE, licence issued, invoice cut
3	Tester	Credit Clients screen	Row with total/received/balance/payable-by
4	Tester	Let the date pass	Row turns RED — but the client is NOT locked out
5	Sales	Record balance in two instalments	Each instalment on the ledger; balance reaches 0; row clears

9. BF-08 — Coupons & Discounts on the Money Path

Step	Actor	Action	Expected
1	Buyer	/buy with the live coupon (≥10 devices)	Box visible; discount line BEFORE GST; totals correct
2	Buyer	Same code below its min devices	"not valid" with reason
3	Tester	Disable all coupons → reload /buy	Coupon box GONE entirely
4	Tester	Exclusive coupon for a specific email	Auto-applies silently when that email is typed
5	Tester	Ecosystem client (SmartDCM/PRS flag)	Flat 10% off every cycle/plan

10. BF-09 — Renewal, Dunning & Suspension Ladder

Step	Actor	Action	Expected
1	Tester	Set a test cloud licence to expire in 30 days; run <code>smartept:dunning</code>	30-day reminder email (deduplicated on re-run)
2	Tester	Step expiry through 15/7/3/1/0	Each reminder fires exactly once
3	Client	Pay the renewal link at any point	Licence extends; ladder resets; ACTIVE
4	Tester	(Separate tenant) let it expire	Grace ladder mails; then suspension — console login hard-blocked with clear message
5	Ametecs	Resume from Central	Access restored instantly
6	Tester	Let purge window pass; run dunning	Tenant status = purged (no SQL 1265 error), licences revoked

11. BF-10 — Growth: Upgrades

Step	Actor	Action	Expected
1	Owner	Cloud client mid-period: upgrade 25 → 40 users	Pro-rata quote for remaining days ONLY; on payment the seat cap rises immediately, expiry unchanged
2	Owner	Perpetual client: capacity upgrade request	Priced from the progressive engine at prevailing rates; new <code>.lic</code> re-issued after payment

12. BF-11 — AMC Year-2 (On-Prem)

Step	Actor	Action	Expected
1	Ametecs	Raise AMC for the BF-04 client (61 users)	AMC = 18% of the PREVAILING progressive price for 61 users (18% × ₹44,400 = ₹7,992 at current bands)
2	Client	Pay	AMC expiry advances one year; invoice cut

13. BF-12 — Hardware Change (release / shift machine)

Step	Actor	Action	Expected
1	Client	Server dies; installs console on a new machine	New fingerprint shown; old <code>.lic</code> rejected on the new box

Step	Actor	Action	Expected
2	Ametecs	Central → licence → shift-machine with the new fingerprint	New <code>.lic</code> issued; history keeps both bindings
3	Client	Import on the new server	ACTIVE again; old machine can no longer validate

14. BF-13 — Corrections: Refund & Credit Note

Step	Actor	Action	Expected
1	Ametecs	Refund part of a paid order	Credit note generated (printable), ledger shows the negative movement; invoice untouched
2	Tester	Try to delete that paid order	Impossible — server refuses (money on ledger)
3	Tester	Delete a ₹0 test quote instead	Allowed (super only), audit-logged

15. BF-14 — Identity & Communications Backbone

Step	Actor	Action	Expected
1	Portal user	Forgot password on client portal	Email OTP → reset → sign-in (Central SMTP)
2	Console user	Forgot password on product console	OTP arrives via the company's own SMTP when configured (check From/headers), else the global relay
3	Company admin	Break the company SMTP password → Send test	Real relay error surfaced; fix → test passes
4	Company admin	Clear company SMTP host	Next reset email goes via the global relay (fallback proven)
5	Employee	EMPLOYEE-role forgot password	Works identically; employee portal opens
6	Tester	Every mail sent above	Corresponding <code>mail_logs</code> row (sent/failed) exists

16. Execution & Sign-off

Run order: BF-01 → BF-14 (BF-09/10/11 can time-shift with test data). Track in the Excel: one row per step, Status PASS/FAIL/BLOCKED, evidence link. **Sign-off rule: all BF-01...BF-07 fully PASS + no open P1 = business flow approved for launch.** Findings go to Ejaz sir with scenario + step number + evidence.
